Upcoming Activities

The U.S. Environmental Protection Agency (EPA) recently proposed a plan that addresses contaminated soil, soil gas, sewer water, and groundwater present at the Riverside Industrial Park Superfund site (site). As part of its plan, and based on an evaluation of the various alternatives, EPA, in consultation with New Jersey Department of Environmental Protection (NJDEP), recommends the following alternatives, which are separated into five media for this site:

- **Waste:** Removal and Off-Site Disposal. This alternative consists of transferring waste from underground storage tanks (USTs), contaminated soil around the USTs, and various wastes found across the site into appropriate containers or transport vehicles for off-site treatment and/or disposal.
- **Sewer Water:** Removal and Off-Site Disposal. This alternative consists of transferring the contaminated sewer water from the inactive sewer line into appropriate containers or transport vehicles for off-site treatment and/or disposal along with proper closure of the line.

- **Soil Gas:** Institutional Controls, Air Monitoring or Engineering Controls (existing occupied buildings) and Site-Wide Engineering Controls (future buildings). This alternative consists of establishing or enhancing site-wide deed notices and/or Comprehensive Environmental Assessments (CEAs) to provide notice of certain property use restrictions. An assessment of sub-slab soil gas and/or indoor air quality will be performed and, if needed, some means of protecting the future occupants from vapor intrusion risks/hazards will be installed. Buildings constructed in the future will include a vapor barrier or vapor intrusion mitigation system to protect future occupants.
- **Soil/Fill:** Institutional Controls, Engineering Controls, Focused Removal with Off-Site Lead Disposal, and NAPL Removal. For this alternative, deed notices will be recorded, and fencing will be maintained/enhanced as appropriate across the site. The bulkhead will be reinforced or reconstructed, and a cap will be placed over contaminated areas. Furthermore, lead-impacted soil/fill in the vicinity of Building #7 will be excavated and disposed of off-site.
- **Groundwater:** Institutional Controls, Pump and Treat, and Targeted Periodic In-Situ Remediation. This alternative consists of institutional controls to prevent potable use of the groundwater. Additionally, a pump and treat system combined with a targeted, periodic in-situ, or in place treatment will remove contaminants in the groundwater.

Past Activities

EPA first responded to the site in October 2009 when an oil spill into the Passaic River from a pipe at the site was reported. EPA and NJDEP responded to the spill and traced the source to two basement tanks located in a vacant building on Lot 64. EPA found several hazardous substances present in the tanks and initiated an

Commented [KS1]: We should include a map of the site if we have to orient people to what the lots are.

emergency removal action to stop the discharge and secure the source. Further EPA investigation of Lots 63 and 64 led to the discovery of several underground storage tanks (USTs), numerous aboveground storage tanks (ASTs), and various other wastes. EPA performed removal activities between 2011 and 2014 to address the conditions on Lots 63 and 64 that included removing liquids from the basements of the vacant buildings, investigating the USTs, investigating and disposing the ASTs, drums and smaller containers, and soil, groundwater, and waste sampling.

After taking immediate action to protect human health and the environment and performing site investigations, Riverside Industrial Park was added to the National Priorities List in May 2013. In May 2014, EPA entered into a legal agreement with PPG Industries, Inc. (PPG), one of the 18 Potentially Responsible Parties identified at the site, to perform a Remedial Investigation/Feasibility Study (RI/FS).

Site Description

The 7.6-acre, partially active industrial park is known as the Riverside Industrial Park and is located in the North Ward community of the City of Newark, Essex County, New Jersey. Both Riverside Avenue and McCarter Highway border on the west along with a segment of railroad tracks adjacent to McCarter Highway. Currently, the central and northern portions of the site contain active industrial/commercial businesses operating, while the south side of the site contains mostly vacant buildings. The Passaic River borders the site on the east. Sections of steel, concrete, and wooden bulkhead provide a retaining wall along most of the site adjacent to the Passaic River; however, the bulkhead has fallen into disrepair in some locations.

Site Background

Much of the Riverside Industrial Park site was reclaimed from the Passaic River with imported fill between 1892 to 1909. From 1902 to 1971, the property was used for paint, resins, linseed oil and varnish manufacturing by Patton Paint Company, which merged into the Paint and Varnish Division of Pittsburgh Plate Glass Company in 1920. Pittsburgh Plate Glass Company changed its name to PPG Industries, Inc. (PPG) in 1968. From the 1970s to the present day, the site was subdivided into fifteen lots and the property has been used by various companies for a variety of businesses which range from chemical packaging to chemical and cosmetics manufacturing.

Commented [KS2]: Reclaimed? Like salvaged? This sentence needs to be fleshed out. If we need to include this sentence, we need to explain this a little further.

Public Involvement

EPA will take public comment on its proposed plan until August 20, 2020. As part of the public comment period, EPA will hold a virtual public meeting on the proposed plan on August 13, 2020 at 7:00 p.m. To participate in the meeting via webinar, please visit EPA's website for more information: [HYPERLINK "<http://www.epa.gov/superfund/riverside-industrial>"]. To participate by telephone, please call into the conference line: (315) 565-xxxx, code number XXXX. Please register in advance of the meeting by visiting EVENTBRITE website or by emailing or calling Shereen Kandil at [HYPERLINK "<mailto:kandil.shereen@epa.gov>"] or 212-637-4333.

Anyone interested in receiving a hard copy of the proposed plan or the materials for the public meeting should contact Shereen Kandil by Thursday, August 13, 2020.

Verbal comments on the proposed plan may be provided during the virtual public meeting. Written comments on the proposed plan should be e-mailed or postmarked no later than August 20, 2020 to: [HYPERLINK "<mailto:smeraldi.josh@epa.gov>"] [jepa.gov](mailto:smeraldi.josh@epa.gov) or Josh Smeraldi, Remedial Project Manager, U.S. Environmental Protection Agency, 290 Broadway, 19th Floor, New York, New York 10007-1866.
